

YOU – WE – TOGETHER!

THAT'S YOU:

- ... **You are involved** in the production, processing or marketing of vegetable products?
- ... **You are interested** in innovative methods to develop new business concepts?
- ... **You want** a network for the exchange of ideas and information about bioeconomy?

THAT'S WHAT WE DO:

- ... **We promote** the creative development of new bioeconomic business concepts!
- ... **We support** the interdisciplinary knowledge exchange on the subject of bioeconomy!
- ... **We connect** the participants in varied workshops and events!

Contact us – we look forward to working with you!

Potentials of bioeconomy in the Alpine Space

along value chains of vegetable
extracts and foods

ABOUT AlpBioEco

We are an interdisciplinary project group consisting of 13 partners in the Alpine Space. Together we are looking for new ways to create economic value from vegetable products – called bioeconomy. For this purpose, the value chains of walnuts, apples and herbs are examined in terms of their bioeconomic potential. Based on market studies, laboratory analyses and the exchange of knowledge between the various players involved in the project, we develop new business concepts. These concepts will be tested and further developed through pilot studies in selected Alpine regions.

Our approach to developing bioeconomic business concepts is transferable to other crop products and, in the long term, to other regions.

Project start: April 2018 | Project end: April 2021

OUR AIMS

- > AlpBioEco uses innovative methods to foster sustainable development in the Alpine region.
- > AlpBioEco raises awareness of the economic potential in bioeconomy.
- > AlpBioEco actively supports interdisciplinary and supra-regional cooperation for the development of innovative business concepts and thus stimulates the creation of new jobs in the Alpine region.

COURSE OF THE PROJECT

1 ANALYSIS

We analyse bioeconomic value chains in the Alpine Space. We focus on three examples: apples, walnuts and herbs.

2 CONCEPT DEVELOPMENT

We develop innovative bio-economic business concepts in cooperation with various stakeholders, such as enterprises and research institutions.

3 PILOT STUDIES

We verify and further develop the business concepts in pilot studies.

4 TRANSFER

We transfer our previous findings to the political level and to other regions.

OUR RESULTS

Roadmap for the replicable analysis of crop product value chains

Business models for the value chains of apples, walnuts and herbs

Best practice examples for the verification of innovative business concepts

Policy guidelines to foster transregional and interdisciplinary cooperation in the bioeconomy

What is bioeconomy?

Bioeconomy means using natural substances for new and alternative products. The most important goal is to replace fossil resources with renewable materials. Synergies of technology, ecology and sustainability are harnessed to create new opportunities and prospects for economic activities.
